Weight:	184 g

\* included

The receivers feature an internal memory and along with the display of »live images« allows the saving of still images.

»mona« is an audio/video transmission system which has been designed as a video intercom for outside the house and/or for video monitoring inside the house – for example in a baby's or sick person's room. »mona« gives you »distant proximity«, safe and easy-to-use.

### Compatible with the wireless signalling systems »lisa« and »signolux«

The system sends live transmissions with images and can be used as stand-alone or together with the Humantechnik signal systems.

The connection of the system to the signal systems lisa and signolux is achieved by a special cable connected to the receiver.

### The components

»mona« is available for two applications, of which transmitters and receivers are complementary:

- Baby monitor for interior rooms
- Door monitor as video intercom (Camera unit suited for use outside)

The system is controlled via the video receivers, being portable devices with a display, which can be used for **up to four monitor units.**

The camera transmitters »mona« **baby monitor** and »mona« **door monitor** feature infrared LEDs and night vision equipment, so that clear pictures are taken even in the dark.

Furthermore, the mona door monitor bears the IP 55 protection class (protected against splash water, dust tight) and is equipped with a motion sensor, which activates the camera when a person approaches.

Included in the delivery scope of the baby monitor is a pedestal and a rubber fastener for an optional suspended positioning.

### Available as complete sets

»mona« components are available as single units or ready-to-use sets.

The sets »mona« **baby monitor- Set** und »mona« **door monitor-Set** contain a monitor unit and the matching receiver respectively.
